Art Unit: 1651

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-10 drawn to a fermentation composition, classified in Class 435, subclass 253.6, for example.

II. Claims 11-14 drawn to a process of making a dried granular fermentation composition, classified in Class 426, subclass 61, for example.

III. Claims 15 drawn to a method of treating an aquatic environment with a fermentation composition, classified in Class 210, subclass 601, for example.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product such as for making silage to feed ruminants or as a soil conditioner.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and material different process, such as by mixing lyophilized bacteria with granulated organic and inorganic carriers.

Each of groups II and III directed to separate and distinct inventions. The method of Group II is directed to a process of making a dried granular fermentation composition while Group III is directed to a process of treating an aquatic environment with a fermentation composition. These methods are distinct both physically and functionally, require different process steps and produce different products and/or effects.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of Group I would not necessarily anticipate or make obvious the any of the other groups.

For these reasons restriction for examination purposes is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Art Unit: 1651

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
